PROFILE

In my early years, I enjoyed fixing computers and other electronic devices. I enjoy building products and using logic to fix problems. Once I started coding, I knew this was my passion.

PROJECTS

Dek-Overflow

Dek-Overflow is a virtual note taking app that makes it easy for all developers to save their coding snippet, videos, and notes in one place to save time instead of surfing google to find the information. I Built using React, NPM packages, Highlight.js, Semantic UI, JSON, Bootstrap.

<https://github.com/dek-haji/Front-end-project>

GROUP PROJECTS

Trestlebridge Farm

Created a console application in C# in dot-net framework, in this project I worked with a group of four developers and we covered error handling try and catch to identify which block of code is throwing exceptions when they happen, we built different classes and interfaces to build different components. We also used Linq(Language Integrated Query) to retrieve data from different sources.

NUTSHELL

Our team was tasked with building a CRUD JavaScript application using React library. Users had the ability to register their own account, add friends, send messages, create a to do list, and see news articles. My responsibility for this project was to implement the login register forms and ensure that users can have separate, unique experiences, by creating session storage. I built the login forms dynamically using React and utilized jQuery to implement a small transition animation between a login form and the registration form. Upon completion of the login task I worked on the applications navigation bar and styling the app using CSS,Reactstrap, Material UI.

Education

- Nashville Software School. Full Stack Developer, 2019
- Nashville Community College. Associate of Information Tech
- Mogadishu University. BBA

TECHNICAL EXPERIENCE

Nashville Software School

2019

Software Developer

A six-month, full-time Developer Bootcamp, with a focus on Javascript, React, C#, and .NET.

- Hands-on application of OOP fundamentals through group and individual projects
- Single-page application development using HTML, CSS, JavaScript, and React
- Task automation with Grunt, Linting with ESLint, module bundling with Browserify
- Project management/tracking with Trello and Git/GitHub
- Application styling with Bootstrap, ReactStrap, and CSS
- Application design through white boarding dependencies and constructing ERDs
- Server-side development fundamentals with C#/.NET including building RESTful APIs

WORK EXPERIENCE

Amina Transportation

Dispatcher

2018 to 2019

- Managed our Nashville office with two other employers.
- Prepared driver schedules
- Responsible for providing customer service to our customers during road hazards
- Assisted drivers in creating their payroll

Grantpa

Manual software Q/A tester intern

Apr 2017- July 2018

- Collaborated with developers and team members regarding testing status and defects
- Tracked and reported issues to Team Lead and Managers
- Created feature file and writing scenarios
- Exported Test Case Scripts to Eclipse IDE and modified/ran the Selenium scripts

Ceva Logistics

Mar 2016 - Dec 2016

Logistic assistant

- Responsible for ensuring there is no faulty loads shipped
- Worked collaboratively with Logistic team in meeting daily target

Asurion

Feb 2015 - Apr 2016

Computer Technician

- Worked as a warehouse computer workstation technician
- Fixing workstation computers on time so there will be no work delays
